Victor Simon Iliya

AWS Cloud & DevOps Engineer

victoriliya15@gmail.com | VictorIliya.com | linkedin.com/in/victor-iliya

PROFESSIONAL SUMMARY

I am an AWS Cloud and DevOps Engineer with 2 years of experience in the Tech industry. I've focused on designing, implementing, and managing scalable, secure, and resilient cloud solutions. Skilled in Infrastructure as Code (IaC), serverless architecture, containerization, and CI/CD pipelines and passionate about leveraging AWS cloud technologies to deliver modern, cost-effective, and high-performing solutions. Now learning to integrate top security practices to the very foundation of my work.

TECHNICAL SKILLS

- **Cloud and Infrastructure:** AWS (EC2, S3, Lambda, DynamoDB, RDS, ALB, VPC), IaC (Terraform, AWS SDK, CloudFormation), CI/CD (GitHub Actions, AWS CodePipeline), Linux.
- **Programming and Scripting**: Python, Javascript, Bash.
- **Containerization and Orchestration**: Docker, ECR, ECS
- **Version Control:** Git, GitHub, GitLab
- **Monitoring and Security:** AWS CloudWatch, AWS Config, AWS IAM, Tfsec, Trivy, SonarQube, Vault.

CERTIFICATIONS

- AWS Certified DevOps Engineer – Professional (Credential)
- AWS Certified Developer – Associate (Credential).
- AWS Certified Solutions Architect – Associate (Credential).
- Hashicorp Certified Terraform Associate (Credential)

EXPERIENCE

DevOps Engineer | SpendNetwork **October 2025 – Present**

remote

- **Developed** Python preprocessing scripts to resolve CSV parsing failures (unquoted newlines, unescaped characters) and implemented null-safe PostgreSQL joins to ensure row-level data integrity post-enrichment.
- **Managed** and troubleshot containerised microservices on ECS, diagnosing health check failures, startup race conditions, and ELB target group misconfigurations in a production environment
- **Configured** IAM users, least-privilege access policies, and credential management workflows using AWS SSO and aws-vault to enable secure infrastructure access for tooling and automation.
- **Audited** AWS activity via CloudTrail and Athena, constructing SQL queries to surface access key usage, cross-service API calls, and potential policy violations for security reviews.
- **Optimised** AWS CloudWatch spend by analysing usage type breakdowns, enforcing log retention policies, and designing an export strategy to S3/Glacier for infrequently accessed logs.
- **Analysed** existing VPC architecture to identify S3-bound traffic routing unnecessarily through NAT gateways, driving up data transfer costs across private subnets.
- **Implemented** S3 VPC Gateway Endpoints to route S3 traffic privately within the AWS network, eliminating NAT gateway charges for S3 data egress without impacting connectivity or security posture.
- **Implemente**d cost savings methodology and save about 20% in total infra costs

DevOps Engineer | LuraVPN **June 2025 – October 2025**
remote

- **Architected** multi-environment infrastructure (dev, staging, prod) using Terraform on AWS.
- **Designed** secure VPC networking with public/private subnets, NAT gateways, load balancers, and service discovery.
- **Deployed** 20+ containerized microservices on ECS with scalable, high-availability configurations.
- **Built** GitHub Actions CI/CD pipelines for automated builds, security scans, and zero-downtime deployments.
- **Engineered** API Gateway for rate limiting, authentication, and centralized routing across services.
- **Optimized** system for scalability, security, and reliable inter-service communication.

TECHNICAL PROJECTS

Development and Deployment of Machine Learning-based Intrusion Detection System (IDS) on AWS with CI/CD

- Developed and deployed an Intrusion Detection System web application using **Flask (**backend), **Next.js** (frontend), and a machine learning model trained on the NSL-KDD dataset with the **Scikit-Learn** library with **python**
- Built a multi-environment **AWS** architecture (Dev, Staging, Production) with **Terraform** to provision ECS clusters, Application Load Balancer (ALB), private/public subnets, Fargate-based deployment targets, and S3 buckets for secure file persistence.
- Implemented **CI/CD** pipelines using **AWS CodePipeline suite** to automate Docker image builds, test execution, and deployment to Amazon ECR and ECS Services, with rollback support.
- Configured security groups, **IAM roles**, and **VPC endpoints** to ensure secure communication between services.
- Authored comprehensive **system design** and architecture **documentation**, and published project implementation details on a personal DevOps blog for technical validation and knowledge sharing.

EDUCATION

Afe Babalola University, Ado-Ekiti – *Bachelor of Engineering in Computer Engineering (**First Class Honors**).*
